List of Figures

Fig. 6.1	Is/ought: the canonical model	104
Fig. 6.2	More on is/ought: inherent limits to the canonical model	104
Fig. 7.1	An example of a behavioral stream: simulated relative changes in land use strategies of Polish farmers in the Odra region (Source: own work).....	113
Fig. 7.2	Development of a simulated decision maker's satisfaction with the outcome of four different behavioral options while playing an environmental game over 14 rounds (Source: own work). Positive numbers denote a positive rating of a strategy, negative numbers a negative rating. M: Learning events. Further explanations are in the text.....	114
Fig. 7.3	Graphical representation of an empirically derived social network (Source: own work). The nodes of the network denote its members, in this case Polish farmers in a village, and the links represent acquaintance or kinship relations	115
Fig. 7.4	The integrative structure of the DANUBIA model. The five components with their disciplinary models are shown as well as the interfaces to exchange data between them	118
Fig. 7.5	A map of the number of rain harvesting systems in the Upper Danube river basin (left) and of liters of drinking water used per day and household for taking showers (right) for a specific simulation time step as examples of outputs as modeled by the household model in DANUBIA. One can distinguish the only sparsely populated region of the Alps with the Inn river valley in the South of the basin, and the larger cities further north, e.g., Munich in the middle (Source: own work)	119

Fig. 8.1	Model of trust-control relationship.....	131
Fig. 9.1	Logic of rational choice explanations of collective phenomena.....	143
Fig. 9.2	Prisoner’s dilemma and sustainable fishing.....	146
Fig. 11.1	Dynamics in the social “system” (Steffen et al. 2004).....	188
Fig. 11.2	Dynamics in “environmental” systems (Steffen et al. 2004).....	188
Fig. 13.1	Context model of promoting sustainable consumption (own model based on Spaargaren 2004: 17).....	231
Fig. 15.1	Media attention cycle for ”climate“ issue in the press of Switzerland, UK, and the US. Note: Trends from 1988 to 2006; number of articles per year, additive for three newspapers in Switzerland (own data), six newspapers for the US and three for UK (Boykoff 2007a)	262
Fig. 15.2	Development of “sustainability” as media issue over time (number of articles). Note: Number of articles per month in the two newspapers “Neue Zürcher Zeitung” and “Tages-Anzeiger”	266
Fig. 15.3	Positions of single topics in the three main areas of sustainability	267
Fig. 15.4	Frequency of country references in the sustainability press discourse.....	268
Fig. 15.5	Eight media frames, characterizing the sustainability press discourse.....	270
Fig. 17.1	The IRGC risk governance process	302
Fig. 17.2	The risk management escalator and stakeholder involvement.....	316
Fig. 17.3	Wider governance issues	318

List of Tables

Table 3.1	Old and new climate change discourse.....	42
Table 9.1	Application of a SEU model to a travel mode choice for a trip from Berlin to Paris	144
Table 9.2	Implicit discount rates for refrigerators with high versus low efficiency.....	148
Table 9.3	Monetary values of changes in air pollution (NO ₂ concentration) between 1990 and 1997 in ten European countries	153
Table 12.1	The major analytical steps of the TdCS design	207
Table 12.2	Comparison of neocorporatism with our TdCS design	211
Table 17.1	Components of pre-assessment in handling risks.....	304
Table 17.2	Generic components of risk assessment	306
Table 17.3	Tolerability/acceptability judgment	310
Table 17.4	Generic components of risk management.....	312
Table 17.5	Risk characteristics and their implications for risk management.....	314
